Raport

la

Lucrarea de laborator Nr. 4

Disciplina: Tehnici de programare

Tema: ”Python”

A efectuat : st. gr.SI – 264 Danuța Daniel

A verificat : asistent universitar Reițman Patricia

Chișinău – 2026

SARCINA LUCRĂRII

1. **Rezolvarea Exerci6ilor de pe Codedex : h;ps://www.codedex.io/python**
2. **Rezolvarea Exerci6ilor de pe h;ps://www.learnpython.org/**

Mersul lucrarii:

1.Codedex

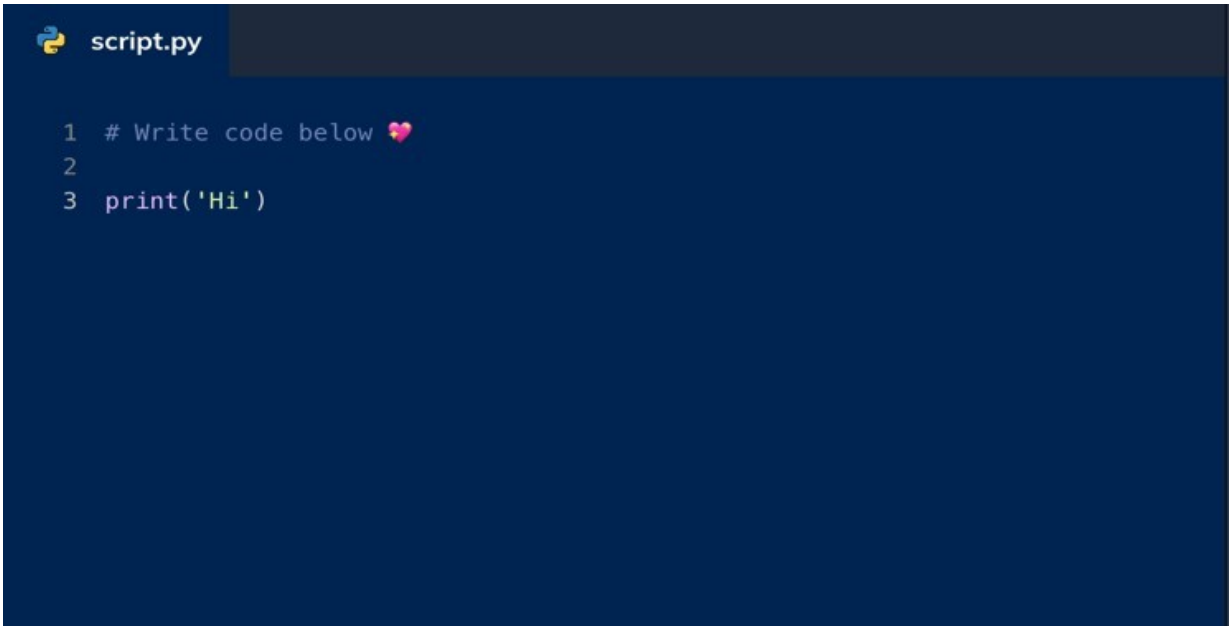

Fig 1.1 - Hi

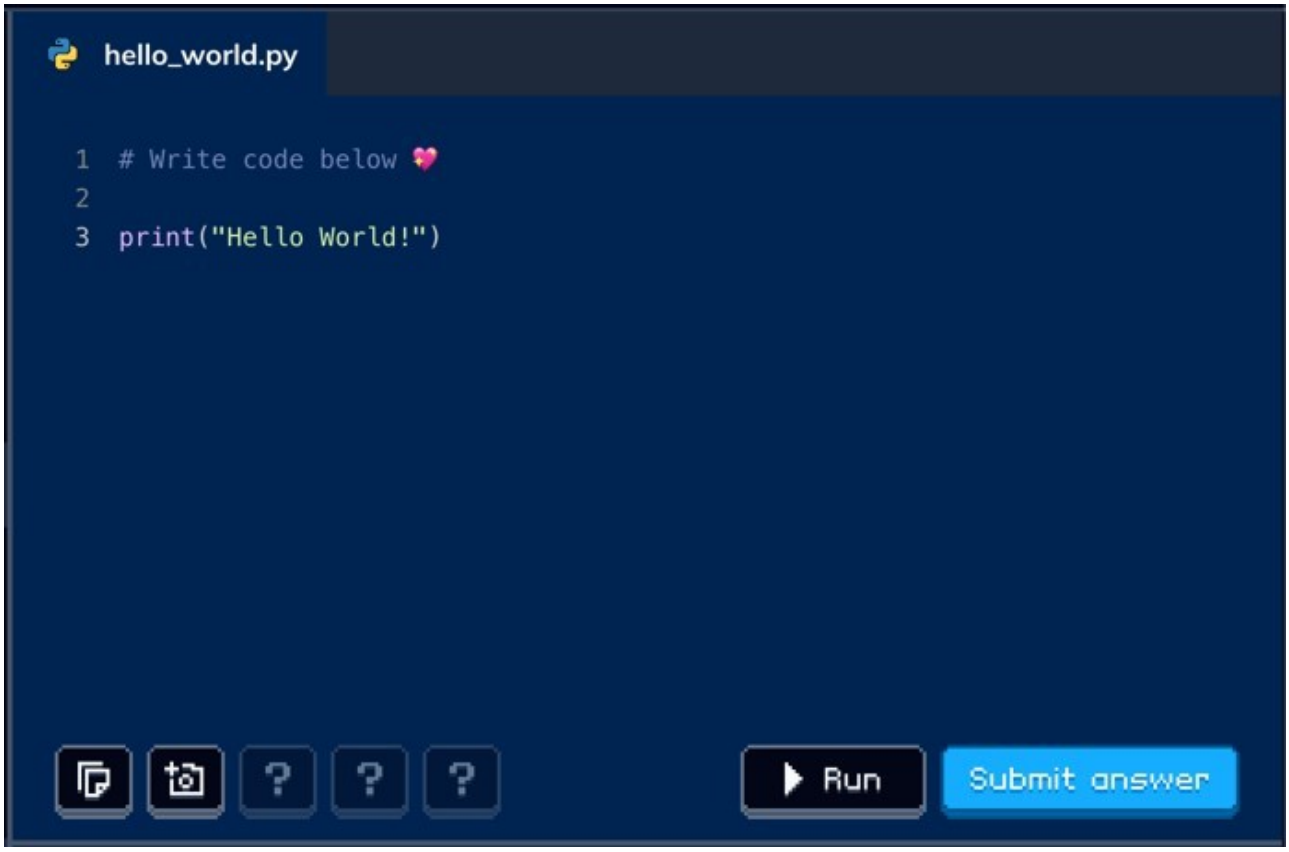

Fig 1.2 – Hello, World!

script.py

```
print("Hello, World!")
```

IPython Shell

```
<script.py> output:
    Hello world!

<script.py> output:
    Hello, World!

In [1]:
```

Great job!

Fig 2.1 Hello, World!

script.py

```
1  # change this code
2  mystring = "hello"
3  myfloat = 10.0
4  myint = 20
5
6  # testing code
7  if mystring == "hello":
8      print("String: %s" % mystring)
9  if isinstance(myfloat, float) and myfloat == 10
   .0:
10     print("Float: %f" % myfloat)
11 if isinstance(myint, int) and myint == 20:
12     print("Integer: %d" % myint)
```

IPython Shell

```
Traceback (most recent call last):
  File "script.py", line 2, in <module>
    mystring = hello
NameError: name 'hello' is not defined

<script.py> output:
    String: hello
    Float: 10.000000
    Integer: 20

In [1]:
```

Great job!

Fig 2.2 Variables and Types

script.py

```
1  numbers = [1,2,3]
2  strings = ["hello","world"]
3  names = ["John", "Eric", "Jessica"]
4
5  # write your code here
6  second_name =names[1]
7
8
9  # this code should write out the filled arrays
   and the second name in the names list (Eric).
10 print(numbers)
11 print(strings)
12 print("The second name on the names list is %s"
   % second_name)
```

IPython Shell

```
    [1, 2, 3]
    ['hello', 'world']
    The second name on the names list is [1]

In [1]: clear
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
    clear
NameError: name 'clear' is not defined

<script.py> output:
    [1, 2, 3]
    ['hello', 'world']
    The second name on the names list is Eric
```

Great Job!

Fig 2.3 Lists

script.py

```
1  x = object()
2  y = object()
3
4  # TODO: change this code
5  x_list = [x]*10
6  y_list = [y]*10
7  big_list = x_list+y_list
8
9  print("x_list contains %d objects" % len(x_list
   ))
10 print("y_list contains %d objects" % len(y_list
   ))
11 print("big_list contains %d objects" % len
   (big_list))
12
13 # testing code
```

IPython Shell

```
    y_list contains 10 objects
    big_list contains 1 objects
    Almost there...
  File "script.py", line 7
    big_list = x_list[]+y_list[]
                      ^
SyntaxError: invalid syntax

<script.py> output:
    x_list contains 10 objects
    y_list contains 10 objects
    big_list contains 20 objects
    Almost there...
    Great!
```

Good work!

Concluzie:

In aceasta lucrare de laborator am exersat concept de baza a limbajului Python , de la prelucrarea datelor pana la tratarea erorilor. Aceste exerciBi mau ajutat sa scriu cod mai clar si sa inteleg limbajul mai bine si mai fluent.
